(Applicant/Applicant's Representative Signature – if appropriate)

Continuation of Substance of Interview including description of the general nature of what was discussed: The examiner contacted the applicant's representative in an attempt to compact prosecution. Upon review of the applicant's amendments and specification, the examiner noted a feature that was disclosed, but not claimed by the applicant. The examiner described known prior art techniques whereby licensed software requires a license key to be entered upon first use of the content and this information is encrypted and then sent to a vendor or third party so that it can be confirmed to authorize use of the software. The applicant's invention differs in the fact that this information is done through an automated process without requiring the user to enter this information and although the encryption key and access number are transmitted to the user, it is not visible. The applicant agreed to amend the claims to distinguish from the prior art in order to allow the application to be issued as allowable.
